

WESTERN SOLAR

Product: SV 90

The SV90 is a commercial grade, solar exhaust fans, proven to reduce the risk of airborne contaminants by extracting dust, fumes and other pollutants in the work place.

- Increases the comfort for you and your staff.
- Enables an improved working environment with lower air temperatures.

The average volume of air extracted is 30 000 litres per second for the solar-powered unit.

"The perfect partner to improve your factory conditions, reduce heat and remove pollutants"

The exhaust fan is surprisingly quiet considering the large volume of air which is extracted and is compliant with workplace safety regulations.

There is also an option for low-voltage which can operate at night providing avenues for 24 hour round-the-clock removal of heat and airborne contaminants.

Western Solar was awarded this prestigious Gold WorkSafe Award "in recognition for an outstanding contribution to safety and health in the workplace" for this particular solar ventilator.

Warranty: All units come with a 5 year structural warranty.

All components have a 12 month warranty.

Price: \$4300 plus installation.

Dimensions
Height 800 mm
Base width 1200 mm
Base length 1200 mm

Capacity:
30 000* litres of hot air extracted per minute
(*Average - As conditions vary so to will results)

BENEFITS

- Solar powered
- Uses FREE energy from the sun
- Remove hot air from your roof
- Extract dust, fumes and other pollutants
- Gold WorkSafe Award
- Roof mounted
- Easy to install

What our customers say

Customer: COULSON Body Repairs
Date: June 2010

We would like to say how pleased we are with the Western Solar SV 90 Solar Powered Roof Ventilators that we had installed into our body repair workshop. The workers find that when the outside air is very hot and you come into the workshop it is comfortable to work in given that the workshop is a big tin shed and not insulated from the convected heat.

Also we find that since having the Western Solar Roof ventilators installed, the exhaust gases from any running motor is expelled thus maintaining a safe and pleasant work place for our Staff, along with maintaining a lower level of dust within the workshop and so helps to protect our clients' vehicles & the health of our workers.

To think that we get all these advantages at NO ongoing running costs as the power to run these Roof Ventilator Exhaust Fans come from the sun and we would have no hesitation in recommending them to other panel shops, or for that matter, to other industrial workshops or warehouses & factories in the Illawarra.
